

Dear Patient,

The Digital Retinal Imaging Camera is a high resolution photographic system which details the retina and can be used to establish a wellness baseline and to follow critical retinal developments throughout your life. This test provides our doctors with a clear and enlarged photograph of the back of your eye where they can instantly evaluate the retina tissue for a wide range of problems including glaucoma, diabetic retinopathy, macular degeneration and other vision threatening conditions.

The images are stored in the computer and compared year to year to monitor any changes. This test is especially important for people who have the following symptoms:

1. Family history of diabetes
2. See spots or flashes
3. Headaches
4. Family history of glaucoma
5. Family history of high blood pressure
6. High cholesterol
7. You've reached the age of 40
8. You are a new patient

There is an additional charge of \$49 for this test. This test is not routinely covered by your vision insurance. However, if there is a medical diagnosis made, you may get reimbursed from your medical insurance.

Please check the appropriate line below and sign at the bottom.

\_\_\_\_\_ I DO want the test performed.

\_\_\_\_\_ I DO NOT want the test performed.
